

ValSol Solar Touch-Up Paint

High-Performance Protection for Solar Mirrors

Valspar has a long history of supply of coatings and solution materials to the Solar Mirror Industry that includes Valspar-coated mirrors in use in solar fields for over 12 years. Valspar offers coating systems and solutions chemicals that meet all solar mirror performance requirements including long-term field durability. Valspar coatings provide reliable protection for solar mirrors during fabrication, installation and lifetime of use. In the event of damage to the factory finish of the mirror during any of these processes, Valspar has developed ValSol Solar Touch-Up Paint to provide the same level of protection to any processing or field defects that is provided by the original finish.

Solution for In-Field Touch-Up

ValSol technology is based on a two-component urethane technology similar in composition to the highest performance factory finish polyurethane based solar topcoat. The packaging of this material in small, two-component spray cans allows for maximum storage life with minimal waste. Common needs for ValSol include:

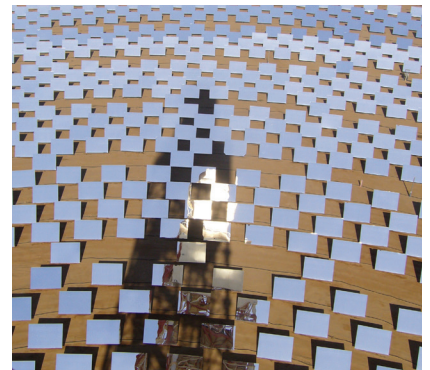

- Defects generated during the fabrication or installation of the solar mirror
- Defects caused by cleaning or field maintenance
- Edge sealing

Product Benefits

ValSol Touch-Up Paint provides a number of unique benefits including:

- Strong durability performance equal to factory finished topcoat
- Easy Application
- Long storage life
- Field application ready
- Small single-use size minimizes waste
- Edge protection and mirror repair

The Valspar Advantage

As the leading global supplier of Solar Mirror coatings and solutions, Valspar has helped to protect and advance the performance of much of the world's installed solar mirror base. Whether your goal is to develop a new generation of solar mirrors, meet ever-changing regulatory challenges or to enhance the sustainability of the solar mirror product, you can count on Valspar to deliver the solutions you need.
